

## Network Optix Verified

Confirmation of Compatibility

Partner: Incoresoft

Partner Products: VEZHA™

Network Optix Product: Nx Witness VMS v4.1

Date of Verification: 1/12/2021

### Summary

Incoresoft completed and submitted an integration to the Nx Integrations Marketplace that enables integration between Nx Witness VMS and the Incoresoft VEZHA™ AI-based video analytics and object recognition system in early January 2021.

- The integration is accomplished through the Nx Witness Server API and allows Incoresoft to pull cameras directly from the Nx Witness Server to VEZHA™ via a custom section of VEZHA™'s browser-based interface.
- VEZHA™ then analyzes camera streams using any of VEZHA™'s analytics modules and returns events and associated metadata to Nx Witness for use in the Rules Engine to trigger specific system actions based on operator defined rules.

### Verification Process

Incoresoft has presented the integration to Nx engineering and product development teams and has shown definitively that the integration is complete, functional, and works as intended. For information on the testing and verification process please contact Incoresoft for additional setup and use instructions.

### About Nx Verification of Integrations

Network Optix verification is intended to verify the compatibility of the partner's specific product, based on the documentation submitted.

Network Optix provides guidance, tools and suggested methods for the verification. The verification setup, configuration, testing and operations are conducted by the partner, and the test result is verified by Network Optix.

Network Optix does not warrant our partners' products nor functionalities and can only verify the version applied in verification tests. Network Optix does not verify product compatibility for installations not comparable with the testing environment.
